

Unione Cooperativa Servizi | Italy Services

Unione Cooperativa Servizi (UCS) provides tailor-made, professional consultancy services in a wide range of areas, including commerce, services and public businesses, to promote the economic success of local entrepreneurs. We offer services to the Alto Adige Tourism Services Trade Union, which is a member of Italy's largest business association Confindustria. Our client portfolio includes small family businesses as well as large corporations. From individual businesses to joint-stock companies, we offer collaborative, dynamic seminars to help businesses to anticipate future needs and propose long-term proposals.

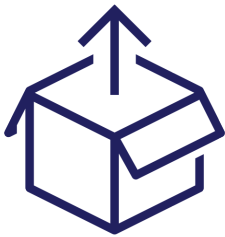

Adoption of a reliable and secure Print Management system for the centralized management of its printer fleet has tightened UCS' security and increased confidentiality. Being a cloud-based solution, uniFLOW Online provides great flexibility whilst lowering the burden for our IT department.

Customer challenges

■ ■ For internal management of its printer fleet, UCS has relied on the HORIZON Group for over 30 years, a certified Canon Business Center Partner with skills and experience in selling and supporting Canon products, including advanced software solutions in the document management ecosystem. With the need for centralized Print Management, increased security and privacy and to guarantee maximum flexibility, HORIZON Group, as an historic Canon partner for companies in the Alto Adige and Mantova, has assisted those who wish to improve efficiency and quality through simplification of digital processes.

Offered solution

■ ■ HORIZON Group proposed uniFLOW Online to manage the 21 Canon imageRUNNER ADVANCE devices installed at various locations so users to benefit from its features, especially My Print Anywhere and Guest printing. My Print Anywhere allows users to benefit from a single print driver and secure authentication with their PIN code to collect printed documents on any company device. Guest printing allows users outside the company network to print and collect their documents via a unique job code, ensuring minimal impact on IT infrastructure and resources.

Benefits

■ ■ Being based on the same cloud platform as Office 365, uniFLOW Online allows easy user integration between the two systems. Furthermore, its scalability allowed the management of scanning processes thanks to the integration with the OneDrive platform. Features incorporated with uniFLOW Online facilitate accurate reporting and provides statistics for all printing, copying and scanning activities to enable total cost control and identification of further saving areas. Furthermore, as it does not require server infrastructure, uniFLOW Online is a solution with low economic and management impact for the IT sector. Finally, the HORIZON Group's expertise in document management systems means support for UCS is available in the long term.

Connected devices

1 x iR-ADV 4525/4535
2 x iR-ADV 4745/4751
7 x iR-ADV 525
