

Release Notes

uniFLOW Online 2022.2.1

1 uniFLOW Online 2022.2.1 - Release Notes

Type	Internal reference	Description
Fixed issue	MOMO-29652	Logging in on on iR-ADV Gen2 devices now works with Universal Login Manager V4.13.1 and V4.13.2.
Fixed issue	MOMO-26318	Printing from Metro Style Apps using the uniFLOW SmartClient for Windows now works on systems with Microsoft patch KB5008212 applied. This fix requires an update of the uniFLOW SmartClient. For more information, see Update of uniFLOW SmartClient necessary (on page 3).

2 Update of uniFLOW SmartClient necessary

uniFLOW Online 2022.2.1 contains a fix for an issue that prevented printing from Universal Windows Platform (UWP) apps (formerly Windows Store apps and Metro-style apps) like the Photos app.

For the fix to take effect, users need to update their uniFLOW SmartClients with a newly generated installer.

1. Navigate to **Extensions > uniFLOW SmartClient > Installer configuration and creation > uniFLOW SmartClient for Windows**.
2. Make sure **Create printer when installing uniFLOW SmartClient** is enabled.
3. If you used the Canon Generic Plus UFR II or PCL6 driver instead of the uniFLOW Universal Driver as a workaround and now want to use the uniFLOW Universal Driver again, make sure **Consider printer and printer driver in update** is enabled.
4. Click on **Recreate Windows installers**.
5. Publish the installers and let the users update.

- After updating uniFLOW SmartClient, users need to log out from Windows and log in again for the fix to take effect.
- The Secure Printing Input spooler now uses the TCP/IP port *SC_Localhost_5150* instead of the *NUL:* port. If the spooler is set to the *NUL:* port, the fix does not work.

For more information, please refer to the corresponding knowledge base article: [KB5008212: Universal Driver Printing from Windows 'Metro Style' Apps not possible after update installation](#).
