

LU-VE S.p.A. | Italy Manufacturing

LU-VE S.p.A. is an international entity with its headquarters and main production unit in Uboldo (Varese) and 16 production units worldwide. Its core business is the creation of products for commercial and industrial refrigeration and air conditioning, using cutting-edge technologies which have become a reference for the entire industry. Today the LU-VE Group is a European leader, distinguishing itself thanks to the high quality and standards of its products, new technical solutions developed in its own laboratories with cutting-edge research and development governed by a fundamental respect for the principles of environmental protection.

We initially installed the uniFLOW On Premise solution which was followed by a requirement to find a solution, to integrate with Microsoft 365, that was reliable, flexible and universal across the different sites around the world. After evaluating the cloud version, we immediately understood the additional benefits for print management so adopted it as soon as possible.

Luca Cargnel, Group Network & System Administrator & ICT Department

Customer challenges

■ The customer already had the uniFLOW On Premise solution for print management at various offices in Italy and around the world so its print management processes were already efficient. That said, having to migrate the application infrastructure from a server system to a cloud system meant that LU-VE S.p.A. needed to adapt the printing platform with the natural transition to the online solution of the uniFLOW software.

Offered solution

■ Eprom Solutions, Canon's Business Center Partner, manages LU-VE S.p.A. printing needs. Thanks to the consolidated relationship and consultancy approach, Eprom Solutions supported the Group to adapt the uniFLOW solution from the server infrastructure to the cloud infrastructure, proposing a Basic Printing subscription configuration for about n. 220 users. This is a very important installation that puts LU-VE S.p.A. among the most important customers for the indirect channel of Canon Italia.

The solution allows users to take advantage of the uniFLOW Online platform. Of particular note are the My Print Anywhere function (which facilitates use of a single print driver, following identification with a PIN code or badge to collect documents on any company device) and Mobile Printing (to enable printing from a mobile device at any location then collecting the documents whilst in the office for better security).

Connected devices

- 17 x Canon imageRUNNER ADVANCE (C35XX, C55XX e C58XX)

Software solution

- uniFLOW Online with 220 user subscriptions (Basic Printing)
- Secure Printing/MyPrintAnywere
- Mobile Printing
- Scan to Myself

Benefits

■ The main advantage of the uniFLOW Online solution for LU-VE S.p.A. is the usability of the printing service and the management of the platform by the IT department, regardless of the geographical location of the company offices (Italy and abroad). Furthermore, the cloud structure has facilitated economic and management benefits as printer servers are no longer needed in separate offices. In the new hybrid working mode, the Mobile Printing function represents a modern and particularly useful tool for those who work remotely to manage their printing needs, thus improving productivity and user experience.
