They aim to be the go-to London construction company for all clients - providing for their construction and property maintenance needs including refurbishment and redecoration; building works and structural repair; response maintenance and void property refurbishment.

> *Introducing the uniFLOW Online solution has allowed us to manage our printing spend and reduce costs and waste by eliminating unnecessary printing. It also ensures our important health and safety documents are retained in the correct location".*
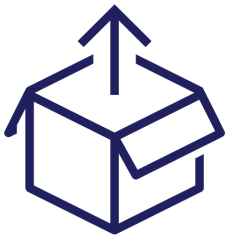

Terry Dixon, Office Manager

Customer challenges and requirements

The previous print system lacked the ability to monitor the usage and associated costs of printing.

Sensitive Financial and Health & Safety documents were being output on the tray for anyone to see before the user could get to the printer.

Scanned documents which reside on the "Box" cloud platform were first scanned to the user's email before being dragged to the correct location. This introduced the possibility of error and mis-filed/ lost documents.

The solution

A uniFLOW Online Secure Print solution was put in place which allowed users to send their jobs to the printer and release them securely with the use of a PIN number, all without having to use a local server.

Scanning directly to BOX with one button sends jobs directly to the user's chosen storage location.

Connected device
- iR ADV DX 3826i MFP

Software solution
- uniFLOW Online Cloud Print & Scan subscription

Benefits

The use of the uniFLOW Online Secure Print solution combined with the imageRUNNER ADVANCE device allows the customer to account for print activity more accurately, enabling them to reduce their spend.

The use of the of the "Scan to BOX" feature saves employees significant amounts of time and removes the chance that important documents are not being saved to the correct location in a timely manner.
